KINKI UNIVERSITY

April, 2013

Words of President in interview

A year when Professor Shiozaki Hitoshi assumed president.

February 26, we interviewed President Shiozaki Hitoshi, medical department professor at Kinki University. Now he **assumed** not only President, but also had **dean** and **hospital director**

(Photo by N.Kawase)

of medical department in Kinki University.

President Shiozaki Hitoshi has been president about a year. He thinks, "If we don't watch it, we cannot understand that." In this past year, he has visited all the institutes at Kinki University. For example, **seafood institutes** in Wakayama or **Biocokes Institutes** are. He said, "I'd like to know all about Kinki University. Then I am going to think about how to lead the future of the university." Besides, students and staff was caught up in the London

Olympic Games in 2012, receiving encouragement and passion from the players. Graduates, students, and staff members from Kinki University participated, and they got medals in the games. That is happy news for Kinki University. President Shiozaki Hitoshi is thinking about the needs to improve the quality of sports centers to provide a good environment for prospective athletes. Then, he said, "Participating in the Olympic is a goal for athletes, but it is not the goal of life. How they live their lives afterwards

is important for them."

President Shiozaki Hitoshi said to Kinki University students, "It would be nice if you can meet people, read book and learned thinking of many people. And I want you to make effort for your goal. You are evaluated by people around you. When you have a lot of time as university students, it is important to learn how you are assessed by others. It is important for you to learn your **assessment** by people.

The 52nd regular concert of the Kinki university band

Audience smiled at beautiful tone.

On November 26, "a regular concert" was held in the Symphony Hall. The regular concert has been held in the **Social Security Pension Cultural Hall** since 1965. It is a traditional event as it was the 52nd this time. It was widely advertised on the Internet and so on. Many people attended the concert.

In the opening, the audience welcomed a conductor with their hand clapping. The performance of the Kinki university band started with cheerful music, and moved to slow tempo music. As this music **drew to a close**, the audience

swelled steady. He played the third music in a calm mood melody only with **brass instruments**. However, the moment drum rolls started, the tempo of this music changed to up-beat. The audience swelled greatly, and their excitement prevailed all over the hall. Keeping the audience's great tension, they played the **woodwind instruments** mainly, and then drums and brass instruments joined the music. They ended in a grand performance. Beside, some people in the audience were overwhelmed at the final grand and speedy music. After the music finished, the conductor became excited to receive a bunch of

flowers. At the time, the audience called for an encore of another piece of music by clapping hard. The performance started again. The audience sent to very much clapping again to the performance that the performance that resonated in the hall. The 52nd regular concert finished keeping the excitement of the audience climax.

The Kinki University band has set up their goal this year as "**working hard together**." In their concert they showed results of efforts that they practice every day. Each members of the brass band had a high awareness of

musical performances, and they united together to participate this concert. The Kinki University band members aren't satisfied with their current ability and would like to improve their musical performance

with first-year students. We hope to see their activities which make an good impression on people through music.

The graduation ceremony of fiscal year Heisei 24

5049 graduates stood each starting point for their lives.

(Photo by S.Kubota)

(Photo by W.Fukuoka)

On Thursday, March 21, the graduation ceremony of fiscal year Heisei 24 was held in the memorial hall on Sunny day. Blass band club and Glee club started performances with opening, graduates wearing suits and kimono entered the memorial hall. We looked like that they became tense. Before opening, the memorial hall

was full of 5409 graduates and many guests.

At 10:15, the busy stage was silent when a curtain rose. The graduation ceremony of fiscal year Heisei 24 was started with solo song of "Kimigayo" by Matsuura Ryoko. In serious air, presentation of diplomas and award certificates was held. Fujimura Kazuma who was delegate of graduates

was presented diplomas. On presentation of award certificates, delegates of department or clubs were presented award, president award, athletic award, merit award and so on. People in the hall clapped their hands to delegates when they were presented diplomas or awards. The president

of Kinki University sent messages to students, "Mistakes make a success. You have to live in society as new global world. I hope you are not afraid it, continue to take on a challenge with learning in Kinki University." The delegate of graduates, Miyagawa Tomotatsu said, "I had a good time in college life which I could take on a challenge everything freely and all out. We took another stride towards new world. We did different ways, however we are going to make effort with friends who met in Kinki University. After that, Blass band club performed school songs, the graduation was closed.

After the graduation, there were many students to take pictures in front of memorial hall. Current students felicitated graduates with alacrity. Tsuji Takayasu who had belonged to tennis circle for

four years said with smile, "The college life was very interesting for me. Kinki University was vernal place where I met many friends. I hope that current students learn a lot and play as far as possible. Besides, Higashi who graduated department of business administration said, "I wanted to stay in the university, but we must have consciousness as member of society. I hope you to live college life to the fullest."

Kinki University gave graduates not only knowledge but also confidence which they will take a new challenge with friends. It became unforgettable place without doubt. We think that graduates take a challenge to new world with friends who met in Kinki University. They ought to show amazing successes to us.

Charm of boxing

Let's start boxing.

You might have an image that boxing is enjoyed by only men. But boxing is popular with women and children these days. There are various reasons to box. Some box for a diet and relax.

One factor of boxing being popular is that a Japanese player became World Champion and got a gold medal in the Olympic Games. Therefore boxing players have increased in number. Recently, many women have started to go to a boxing gym for diet, and their children also began boxing. What's more, after they began boxing for diet, some women came to like boxing so

much that they started to take part in matches. Moreover, the number of elementary school children that box not only for sport but also for good health has increased. Sin-ichi Tazoe, chairman of Wing Gym said, "When today's elementary school children grow up, the number of boxers will be larger. The boxing world might be bustling."

Currently, people of all ages, from first graders to old people, go to boxing gyms. The ratio of male and female in the gym is four to one. But the number of women has increased year after year because instructors give advice about meals and healthy diet.

Boxing training is important to communicate with boxer as well as such advices. Instructor can give suitable advices according to each player's feature. Boxer is able to also enjoy playing. Besides, rhythmic sense is also important in boxing; therefore player cultivates the sense by exercising to music. Through playing music, instructors not only can help players improve their rhythmic sense but also can make their boxing gym cheerful mood and create a place where everyone can enjoy boxing.

A charm of boxing is that everybody can experience a thrill that can't always be experienced otherwise and can

(Photo by R.Mori)

obtain a well-balanced body by training their whole muscle. In addition, boxing gives boxers concentration and emotional strength through exercises of the sparring and hitting mitts. Tazoe said, "When boxers are having fun, the instructor is, too." Boxing gives players many

things, such as ideal body and emotional strength, but the most important is the joy of boxing. Boxing is a hard sport, because, for example, it requires losing weight. On the other hand, everybody can start it easily. Why don't you enjoy boxing?

Declining of Japanese agriculture.

Japanese agriculture is turning down today. In Japan, agricultural production of the gross domestic product has gone down from 9 percent to 1 percent from 1960 to 2012. The population of farmers has fallen from 11,960,000 people to 2,520,000 people suddenly. There are two main reasons for this. First, agriculture doesn't enable us to make a living. Second, many people prefer to work as an office worker to engaging in agriculture. About 85% of Japanese farmers are

farm families involved in another business. Besides, most agriculture is in small scale and faces the problem of aging. Domestic agriculture is not enough, so Japan depends on foreign countries for crops.

Free trade agreement called TPP has been issued now. Japan will have some advantages by joining this agreement. For example, liberalization of trade with abolished customs will increase export of Japanese products. Arrangement of rules and abolition of trade restrictions will

cause advantages for major manufacturing companies. Trade in enterprise becomes more efficient and profit increases. However, there are some disadvantages in joining this agreement. Due to the increase of the import of low-priced crops from foreign countries, the sales of Japanese crops will become smaller. If farmers start a price competition to sell Japanese crops, deflation may happen. As a result, unemployed persons will increase. Many people are worried about high unemployment rate. When

we consider this, effects of disadvantages are greater than effects of advantages. We should think about ways to increase the gross domestic product of Japanese agriculture before we join TPP. It is important to make an opportunity for

young people to become interested in agriculture in order to decrease expenses in agriculture. In the future, we should make Japanese agriculture active.

Current key

The key has developed with our interest in prevention of crime.

Nowadays, Keys are one of the most necessary things in our lives. Keys are used for thing such as houses, cars, bicycles or shutters and multi-story parking lots. Types of the key are abundant. There are about 400 types for car keys, 680types in furniture keys.

They say that Japan is one of the safest countries in the world, and recently

people have been interested in prevention of crimes. The effect of keys for prevention is much higher year by year. The increase in the number of people who live alone has caused people to become more aware of crime. People who live alone are frequently absent. For this reason, they have a high possibility of being victim.

Today, we can make copies of a key easily. Yamamoto

Yoshinori, 51, the person in charge of the shop, Repair service, a shop that makes duplicates of keys, says it is easy to make a copy of a key in about one minute. To be able to make copies of keys easily is a cause for many crimes. Keys effectivity crime prevention is raised to prevent the crime of such a copy of a key. In order to prevent the crime of making key copies from happening, it is necessary to make keys more complicated has become high. Nowadays the key which are difficult to make copies are used at apartment buildings and condominiums such as card keys like the ones used in hotels and electronic locks with fingerprint authentication. Thus, the key comes with a twist to prevent crimes from occurring as well as to protect important things.

The key has developed

(Photo by R.Amatsu)

(Photo by S.Kubota)

widely. In case of car's keys, they are now designed so the lock will not be picked easily. Car's Keys developed things not to be able to pick and make the copy of keys by wireless. For cell phones and PC's, information sometimes disappears when people type the wrong password again and again repeatedly. Besides, cell phones and PC's can keep a record of who has tried to unlock the password

with their cameras. Thus, the key continues evolving and changing its styles and functions according to the need for prevention of crimes. Today, our keys can be damaged in every way and our important things can be stolen. Therefore, we should change the kinds of the key we use depending on what important things we have.

Air pollution

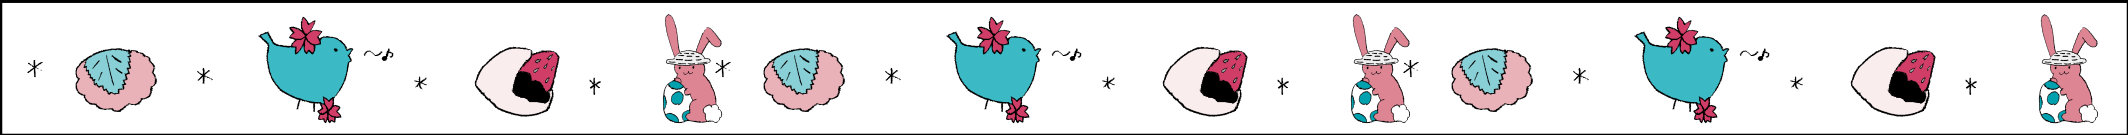

Recently, air pollution caused by fine particulate matter PM2.5 has become a hot topic. Air pollution influences the environment and mammals' bodies including human beings. So there is no ignoring the air pollution problem. Air pollution is caused by air pollutants generated by combustion at fuel factories and power plants, and by automobiles. Its impact will vary slightly depending on the type of pollutant, but it is harmful to the respiratory tract of both organisms. The air pollutants include sulfur oxides, nitrogen oxides, and particulate matter. Generated by the combustion of fossil fuels, sulfur oxides can cause acid rain and asthma. Nitrogen oxides are generated by fuel combustion at high temperature.

The particulate matter is categorized according to the particle size of solid or liquid, such as those resulting from black smoke emissions and automobile exhaust, dust from deposition of minerals from natural phenomena such as dust, particulate matter, airborne particles according to their size divided matter, the fine particulate matter. PM2.5 is classified as fine particulate matter, and can cause lung cancer.

At present, various efforts have been made by many groups and organizations in order to reduce air pollutants. Planting movement that will absorb nitrogen oxides and particulate matter has been made by the local governments. Studies on planting plants effective for large-scale air purification have been done. Also, the development of a substance which is capable of removing sulfur oxides from the atmosphere, nitrogen oxides is in progress. Moreover, in order to reduce fuel consumption on a scale of individual learning and the environment, energy saving campaign to tackle, such as public transport or are being carried out.

Burning fossil flue and using the car are indispensable in our present life. In short, we can't avoid the problem of air pollution. But air pollution influenced to give our health what we can't ignore. Many companies, organizations are working to improve our environment, but there is a limit. You can't do a big thing, but you can do something small for our environment. It doesn't seem like other people's affair but your action is indispensable for the environment. Would you try to do something to save our environment?

OPINION

”日本農業の衰退化”

今日、日本の農業産業は衰退化している。日本では、1960年から2012年までに国内総生産における農業生産は9%から1%にまで下がってしまった。現在の日本では農業をしている人のうち約85%の方が兼業農業である。さらには、多くが小規模な農業で高齢化も進んでいる。国内だけでは農業生産は追いつかないので、今後の農産物はさらに海外に依存するだろう。

[WORDS]
