

Development of novel cultivation methods for useful edible mushroom by with safety was guaranteed

(Prof. Norifumi SHIRASAKA, sirasaka@nara.kindai.ac.jp)

Research Area

1. Development of novel cultivation methods of mushroom
 - ① Valuable mushrooms (i.e. Matsutake mushroom)
 - ② Avoiding radioactivity pollution
 - ③ Enhancement of functional components
2. Construction of genome and proteome database for mushroom
3. Development of novel business model for mushroom industry

Recent Activities

- Publications: J. Nat. Med. (in Press), Genome announcements (2016) 4(3)
- Patents: Food with bone metabolism improvement effects (2017), Food with fat metabolism improvement effects (2017)
